

# CONTRACTOR LOGISTIC SUPPORT

STS Defence has been providing Contractor Logistic Support (CLS) for the MoD since the early 90s; supporting Air Traffic Control Equipment for both the RAF and the Royal Navy.

The company supports systems and equipment through mid-life upgrades and provide obsolescence management and advice; through to the end of system life and manage recovery and disposal of all items.

## Key capabilities include:

- ◆ Documentation & Design Support
- ◆ Installation
- ◆ Obsolescence Management
- ◆ Disposal
- ◆ Prototypes
- ◆ Worldwide Support
- ◆ NATO Codification

All prototypes are carried out in a standardised workshop, which operates under lean manufacturing principles and qualities. Successful prototypes can lead to low volume productions, based on customer preferences.

The CLS team are an effective solution for electrical and electronic equipment manufacturing, especially when the design information is incomplete or in its initial stages.
