

DESIGN

The STS Defence Engineering Services department offers full and integrated design, from an initial concept or a detailed specification.

Disciplines include; mechanical, electrical and electronic design, all developed into a prototype and production if required.

Key Capabilities Include:

- CAD Design
- Electronic Design
- Embedded System Design
- Software/Firmware Solutions
- Proof of Concept Testing

The designs are produced in modern offices which operate under Lean principles headed by a Project Leader and a team of specialist Mechanical, Electrical and Electronic designers.

A full design pack incorporating all technical drawings and documents required for build is produced and maintained for every project.
