

# INSTALLATION

The STS Defence Installation team offers a flexible and timely approach in installing systems and equipment.

The team offers years of experience meeting and exceeding the demanding standards required by the Ministry of Defence and their major UK prime contractors.

The team can install systems or individual equipment into many military platforms within short time frames, working efficiently alongside other yard authorities.

## Key capabilities include:

- ◆ Systems & Equipment modifications/upgrades
- ◆ Testing & calibration
- ◆ Flexible & mobile engineers

STS installation engineers have developed and installed a range of non-combustible ship furniture and 19" equipment racks conforming to all relevant defence standards. Achieved through continuous improvement, innovation, and years of experience STS understands the ruggedized environment in which the MoD operates.

During the Iraq War, STS Defence carried out installation work, in the Gulf, for the Shallow Water Influence Minesweeping System (SWIMS) as an 'Operation Telic' Urgent Operational Requirement. This system was used to help clear the Shatt Al Arab, the Khawr Abd Allah river and the approaches to Umm Qasr, allowing the passage of RFA Sir Galahad; the first ship to carry humanitarian supplies into an Iraqi port. Mr J D Coles, Chief Executive of the Warship Support Agency and Director General Nuclear, commented:

***"Their input has consistently achieved excellence, often exceeding customer expectation."***
