

Modular Office Furniture for Defence Environments

This modular, aluminum structured, furniture system manufactured by STS Defence Ltd provides an innovative solution to ship-borne office environments, where space is of a premium. Furniture systems can be constructed from cupboards (with or without shelves), integral filing systems or desk drawer units. All

bench tops are manufactured from solid wood and have a 'poyflor' conductive surface, for strength and durability. Power or RJ45 outlets are also available to customer specifications.

Modular units are selected by depth depending on the required application and feature 19" rack fixings in both the front & rear cupboard uprights. Louvered vents in the side panels provide ventilation when equipment is installed inside a cupboard unit. All doors openings are removable and reversible to optimise available space and feature either secure or non-secure locking mechanisms.

A FOUR-CUPBOARD UNIT INSTALLED IN A
MCMV MAIN COMMUNICATIONS OFFICE

Each module is Nato codified and manufactured to a high standard MoD specification. Structured from a welded aluminum frame with pressed aluminum sheet panels, a single unit is strong, robust and lightweight.

All modules are finished with powder coating spray paint, giving rise to a durable damage resistant finish, colour coded to customer specifications.
