

Using our logo

It is important that our logo appears consistently across all of our communications.

Colour

The coloured logo is the primary version and must always appear on a white background. The white logo should only be used on a dark background.

Shape

For maximum legibility, it is important to keep an exclusion zone around the logo. The minimum exclusion zone must equal the vertical face of the hexagon, as indicated below right. No other elements should encroach on this zone. Always use a master artwork file for the logo. These are available as **eps** (preferred), **jpg** and **png** files at:

www.sts-defence.com/document

Do not edit or modify these files. **The logo must never appear stretched, rotated or with any effects, eg shadow, glow etc.**
